

Arbela Quick Start for Asset Management

Reduce asset downtime and optimize the supply chain with Arbela's rapid deployment service

If an asset such as a truck, machinery, or facility equipment needs maintenance or repairs, most businesses find out when it's too late — when the asset breaks down or otherwise goes "offline." In competitive markets, where a supply chain moving with maximum efficiency is critical, one offline asset can have a ripple effect bringing productivity to a screeching halt (sometimes, literally).

If you're ready to move from reactive to proactive — and even predictive — asset management, Arbela can help with a rapid deployment of the Asset Management module for Microsoft Dynamics 365.

Quick Start Asset Management: A rapid, fixed-fee implementation

With Arbela Quick Start service (also available for D365 Sales and D365 Field Service), you can be enjoying most every benefit provided by the Asset Management module in as little as 30 days. Benefits such as:

- Minimizing asset downtimes
- Managing assets on location(s)
- Tracking usage/maintenance history

- Switching from unplanned to planned maintenance
- Improving work order and fault management
- Incorporating asset data into enterprise systems
- And much more...

100% scalable: a future-proof implementation

As a template-based solution, Arbela Quick Start for Asset Management is a rapid, affordable service. It also sets you up for expansion and customization down the road, integrating completely into the Microsoft stack. Asset Management can be scaled and customized as assets are added or subtracted, or as your business needs change.

It currently comes in three "flavors":

- **Essentials:** manage a primary functional location, complex asset structures, work orders, and incorporate mobile devices into workflows/reporting *
- **Standard:** includes everything in

Benefits

- Move from reactive to predictive asset management
- Reduce downtime, improve operational efficiency
- Be up in running in as little as 30 days
- Enjoy a "future-proof" implementation of a critical D365 module

Essentials, with addition scheduling/dispatching functionalities, management of multiple functional locations, and enhanced mobility services *

- **Enterprise:** all of the above, as well as, fault management, and a host of additional features or options including leveraging IoT to further insight and productivity *

Is Arbela's Quick Start Asset Management the right fit for your business? If keeping the supply chain moving with maximum efficiency and optimizing productivity matter, the answer is a clear yes.
