

Arbela Workflow Manager

Simplify processes, reviews and approvals to drive productivity

Manage workflows with ease

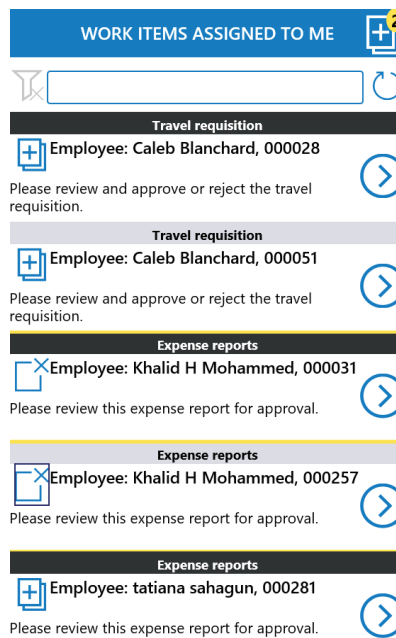

Bottlenecks in workflow automation remain an all too common pain point for companies. With an ever mobile and agile workforce, budget managers, invoice approvers, and other workflow signers are often on the go.

Managing and approving multiple time sensitive workflow processes get overlooked and delayed. These delays trickle down impacting employee expense reimbursements, AP invoice payments, and new customer onboarding.

Arbela Workflow Manager addresses the bottleneck that emerges from the growth of a more mobile workforce by giving managers the tool to keep their processes running at any location.

Access anywhere via mobile device

No matter what process your workflow is coming from, who is transmitting it, or what device they may be using — you can manage it all from the palm of your hand.
