

# Practical Power BI Training

## Expert training in turning your existing data into real insights

There's a proverb: give a man a fish and you feed him for a day; teach a man to fish and you feed him for a lifetime.

Arbela's Practical Power BI Training service will keep you fed for a lifetime.

### Making Power BI custom-fit your business

Power BI has a lot of moving pieces, and most businesses don't necessarily have the experience using every feature.

Arbela's Power BI experts are versed in technology solutions, business use cases and storytelling through data. This training will ensure that Power BI models built will display the data effectively to help move your business forward.

Power BI Training is a single-day session in which an Arbela solutions expert works with you to understand your overarching business strategies, identify KPI outputs related to those strategies, and empower your team to use Power BI to its fullest.

The training will allow you to:

- Discover and define the critical questions your business needs to answer
- Delineate the facts, dimensions and metrics that best form answers to those questions

- Organize your data into a strategically relevant, tactically effective format
- Build dynamic and interactive data visualization that you will continue to use – even after we leave
- Create a presentation layer in Power BI that lets your data tell its own story
- Predict and proactively address future issues by being able to capture the right data to make an impact

While this is a training session in which you and your team will learn how to do all of the above and more on your own, it's also a working session with an Arbela expert that will leave you set-up with data-streams and dashboards that can give you immediate insights toward impactful actions.
