ARBELA

Microsoft Dynamics AX 2012 Performance Tuning

Bring your on-premises Dynamics solution up to speed in just 5 days

Like any solution, platform or process, Microsoft Dynamics changes over time. And while a business' overarching strategy may not change over time, its tactical objectives and operational requirements often do. Which means the way a business uses Microsoft Dynamics now should rarely be how it used Dynamics five years, three years, or sometimes even one year ago.

It's time for a tune-up

Tune-up and fine-tune your Microsoft Dynamics AX platform with a service offering from Arbela Technologies, a premier software and services Microsoft Gold Partner awarded for our work in helping businesses get more from their Microsoft solutions.

Our Dynamics AX Performance Tuning offering is a five-day program where our engineers and business advisors work with you and your team. The action plan checklist includes:

- A detailed review and examination of any performance issues

- Exploration and reporting of infrastructure, network, AOS, Batch Server, Reporting Server, DB server and SQL configurations

- Review and localization of any issues in the code/SQL/data structure

- Review of fundamentals, such as hardware sizing

- Review of SQL table index issues or any deadlocks

- Run performance counter to check CPU/ memory utilization during peak load

- Identify process improvement in continuous delivery / build and release management

- Installation and insights into needed performance monitoring tools

- Active and ongoing monitoring of overall system performance

- Review and analysis of current, functional usage of the system (and insights to optimization)

- Application and support for special hotfixes and patches (if needed)

- Execution of all agreed-upon aligned steps and action items

Additionally, you will receive a Microsoft Dynamics 365 for Operations Readiness Overview, helping you determine if a

Benefits

- Performance optimization of your central business system
- Consultation with technology and industry experts
- Improved operational efficiency
- "Modernization" of outmoded processes
- Determine Dynamics 365 migration readiness

Deliverables

- Initial requirements documentation
- Known and discovered issue reporting
- Technical analysis of:
  - Infrastructure
  - Application and Customizations
  - Release and build process
- Suggested solutions, actions, and maintenance plan
