

Arbela Manufacturing Maturity Assessment

A two-day process-oriented evaluation specific to your business

A business must know where it is now before planning where to go next. Which is why before strategic road mapping, before any kind of organizational change, we start with a custom assessment of your business.

Do you have the right technology in place to fuel transformation? What's the "maturity" of your teams' skills and business processes? How does it compare to others in your industry?

Arbela's Manufacturing Maturity Assessment analyzes the organization, the people involved, and the materials included with a process-oriented approach. This enables you to evaluate your preparedness for transformation toward manufacturing and supply chain excellence, to understand the potential benefits to be gained, and to identify key strategic initiatives.

Maturity assessment overview

Our team of industry experts evaluate the efficiency and compliance within functions, systems and data integration, while also uncovering potential market and operational opportunities to capitalize on during this two-day program. Specifically, this assessment will go through the following steps:

- **Data integrity** - Review of data integrity, data quality, data reliability and availability

- **Strategic initiatives** – Provide targeted opportunities for your business that are surfaced through observation of operations and recurring themes from interviews
- **Shop floor discovery walkthrough** – This is our opportunity to give an outsider's nonbiased view of your facilities and operating procedure

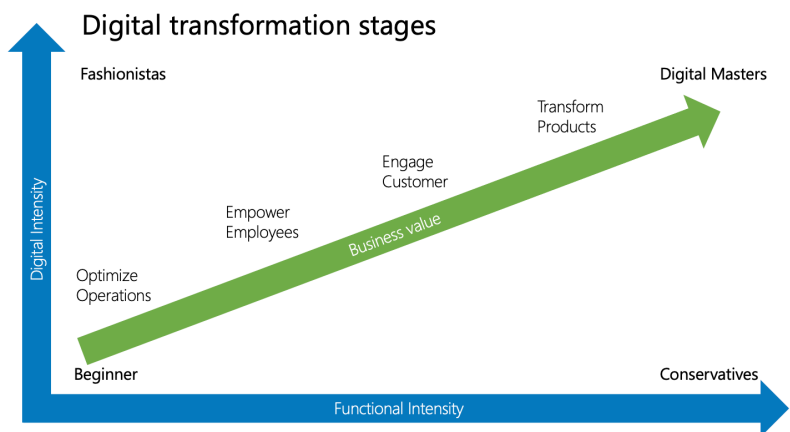

Contact us at info@arbela.com to schedule your Manufacturing Maturity Assessment.

Benefits

- Understand your level of preparedness for digital transformation
