

Power Platform Workshop

Build custom “low-code” apps

“Is there an app for that?” If you or anyone in your business has ever asked that question, Arbela’s Power Platform workshop is for you.

At the end of this 1 to 3 day workshop — customized both in content and calendaring to meet your unique business requirements — you and your team will have the skills required to use Microsoft’s Power Platform to create business apps that help you:

- Rapidly adapt to changes in the market, and business processes and practices
- Optimize workflows and data flows across all systems and devices
- Automate more business processes and integrate more platforms
- Take charge of your technology

Roll with the changes

Markets are changing faster than most platforms or 3rd party apps can keep up. Having the ability to create the apps you need when, where, and how you need them is essential in staying competitive.

We can teach you how to adopt an agile approach to application development, manage scope, and identify and deliver against business requirements and goals. Arbela’s workshop will empower you with the skills and insights you need to be

prepared for changes both in external market trends and in internal business practices — and roll with them.

While the workshop can be customized to your business goals and calendars, the standard engagement follows an agenda outlined in the sidebar.

Are you ready?

Are you ready to take command of your technology and your market and make your own “low-code” applications? We’re ready to show you how it’s done.

Contact us at info@arbela.com for more information or to schedule your Power Platform Workshop.
