

ArganoArbela BI Essentials

Start your BI journey and gain insight to make better decisions, faster

Wondering where to start with business intelligence? Start with the essentials: ArganoArbela BI Essentials.

This compact, cost-effective business intelligence solution from ArganoArbela helps you quickly make the leap from reporting to analytics with end-user reports that are immediately actionable and extendable.

Let us help you take the first step on your Business Intelligence Journey. ArganoArbela BI Essentials is a packaged offering including Power BI data models, Power BI dashboards and reports with all cloud costs and access to our expert support team – for one monthly price.

Simply put, ArganoArbela BI Essentials is a lean, clean business intelligence solution that gets you back to managing your business (with data).

A solution for your business units

Business intelligence, at its core, is about accessing data and presenting it in a consumable format to make the right business decisions at the right time. Because ArganoArbela BI Essentials is focused on specific data sets from specific lines of business – a set of data, rather than a sea of data – implementation and maintenance costs are low, and reporting is streamlined and simplified.

With ArganoArbela BI Essentials you empower your department leads with the specific data and business intelligence skills and reports they need to make better decisions, drive more revenue, reduce costs and optimize workflows. This allows your IT staff to focus on technology infrastructure and strategy rather than time-consuming requirements gathering and report building for everyone in the company.

Another benefit is that the solution does not require you to provide high-cost resources to extend or support it. Our dedicated support team does this for you, providing cost-effective services for your deployment, and training your users to extend reporting and become more self-sufficient.

ArganoArbela BI Essentials can serve as an initial step in your path to BI maturity. Instead of taking a company-wide deep dive into reporting, you can take one step (or department) at a time, with the ability to expand your solution as your business and your needs grow.
