Benefits

- Efficient: reduce time spent on financial consolidations

- Integrated: incorporate data *outside* Dynamics as well

- Detailed: create an audit trail, including historical conversions

- Flexible: data is "reporting engine independent"

Arbela One-Step Consolidation

Streamline financial consolidation criteria across many entities

Financial consolidation across multiple business entities — sometimes, even across a single entity — can be a challenge. One keystroke error can create a ripple effect that brings an accounting department to its knees.

It's also a time-consuming task, requiring staff to take on tedious manual entry, look-up or confirm exchange rates across multiple business units, and learn new processes.

Arbela One-Step Consolidation (OSC) simplifies the entire financial consolidation process, empowering multi-national, multi-currency organizations with an extension for Microsoft Dynamics 365 Finance that provides a single interface for entering ALL consolidation criteria.

The solution not only supports automated lookup of foreign exchange rates based on conditions (such as average rate or close date for a specific period) or properties (such as average or actual), it saves these criteria at the time of consolidation. All you need to do when repeating the process is to choose the timeframe of the run and the property.

OSC makes the consolidation process efficient (easy to share across an enterprise) and auditable, while freeing up staff to work on projects that drive revenue, rather than tasks that merely account for it.

Financial consolidation: streamlined, simplified, and automated

We named it "one-step consolidation" software because that's exactly what it does: a user simply specifies the timeframe and the exchange rates for the consolidation. Done. One step. All consolidation parameters are saved and available so that any errors can be quickly identified and resolved.

While there are some tools in Dynamics 365 Finance that can help with financial consolidation tasks and reporting, they can often be complex, unforgiving, or have an undetermined future.

By extending your financial platform with OSC, you enjoy a solution that reduces complexity and reduces opportunities for error.

OSC is just the start...

OSC is one of many customer solutions Arbela provides to help further tailor and optimize your Microsoft solutions and fuel your business strategies.

Other extensions include Arbela Audit & Security Manager (improve overall security management and audit reporting), Arbela Workflow Manager (remote admin of workflows and approvals), Arbela Data

Insights (extracts, stores, and displays business-critical information), and more.
